Document Technology System's (DTS) headquarters (shown right) is located in Cuyahoga Falls, Ohio.

DTS was founded in 1996 specifically to address the needs of governmental agencies to manage their property and vital records. We now provide turn-key document management and imaging solutions to government agencies.

TrakRecord®

TrakRecord® is our premiere offering. It automates the most critical functions of the Recorder's Office and eliminates the need to retain paper copies of instruments. It speeds turnaround time to filers and makes information available to the public via the internet.

Our on-site installation, start-up, training, and project management services help ensure that your implementation of the TrakRecord® system goes smoothly and helps you to quickly achieve success.

Image Conversion

We provide image conversion services to incorporate data, microfilm/fiche or paper records, into our system and others.

Document Management

Our document management imaging solutions for vital records such as marriage, birth and death certificates, building plans and permits, allow agencies to easily access this vital information in a timely and cost efficient manner.

Custom Software Engineering

We also offer customized software engineering, consulting, training, and installation services for the Microsoft products such as Windows and SQL Server.

Enterprise Solution Strategy

Our applications comply with industry standards such as ODBC, TCP/IP, API's, and common Web standards. This adherence to industry standards improves data access across key applications (i.e. Land Records, GIS, Tax Appraisal).

DTS Corporate Headquarters, Cuyahoga Falls, Ohio

A web interface can be implemented which will give users a common interface to all of the appropriate data. This standards based client/server model, allows you to utilize applications that meet your departmental needs while maintaining data consistency across departments.

Security

Since all of our work, including Document Management and Image Conversion is done at our offices, you'll never have to worry about the ramifications of sending sensitive work offshore.

Industry Experience

Our staff is made up of senior management and technical personnel with an average of 15 years of computer industry experience. DTS also employs specialists with over 20 years experience in Recording, Document Management, GIS, and Land Reclamation. This industry experience includes the design, implementation, and support of many enterprise solutions in organizations such as the US Air Force and Navy, Chicago Public Schools, General Electric, Westinghouse, the City of Phoenix, County of Summit, and the State of West Virginia.
